

## NOVA<sup>®</sup> casement locking system

With a removable handle and cover, our latest casement hardware solution offers unprecedented flexibility, optimized security, and effortless operation. Allowing for quick and easy installation and eliminating the potential for damage during shipping, the NOVA Casement Locking System is the most advanced and adaptable solution on the market.

### // product features

- Removable handle and cover offers styling flexibility and minimizes inventory cost
- Metal or composite cover and lever options available
- Single-point or multi-point configurations
- Self-locating guides provide quick and easy installation
- Locking handle can be mounted from either side of window frame
- Adjustable mushroom-head roller pins overcome manufacturing tolerances, ensure smooth operation and allow user to adjust seal compression
- High-strength design for impact-certified applications
- All stainless steel locking bar design for maximum corrosion resistance
- Available in all stainless steel or powdercoated alternative with stainless steel pins

### // product specifications

- 46 mm (1.8") of lock bar travel provides secure multi-point locking and enables progressive locking action
- 227 kg (500 lbs) load per locking point is achievable, allowing specification into hurricane impact applications
- Lockpin adjustment: +/- 1 mm

### // materials & finishes

- Mechanism is die cast zinc alloy with stainless springs
- Covers are molded copolymer or die cast zinc alloy
- Locking bar is all stainless steel
- Available in color matched, powdercoated alternative or architectural finishes
